SOLID PLASTIC PARTITIONS

Revised 2/26/22

Thank you for choosing Global Partitions

This installation guide was designed to cover as many variations of hardware and mounting styles as possible, while also trying to keep it light and focused.

While all materials and standard mounting selections are present, in order to cover the numerous choices of hardware, we have presented each material with it's default hardware. Therefore, while each type is covered, it will be with it's most common mounting style (i.e. continuous brackets on ceiling-hung, piano hinges on Polymer, etc).

Please read all steps in their entirety before beginning actual install, as some field conditions and hardware combinations may require alternate installation.

The Components for this project have been custom fabricated. They are guranteed with respect to manufacture and workmanship and were inspected at the factory.

Before beginning work, the units should be inspected. If damage occurred in transit, report immedicately to the freight company or other agencies that may have caused the damage.

STEP 1 LAYOUT

FLOOR ANCHORED/OVERHEAD BRACED

NOTE:FLOOR MUST BE CONCRETE

- Review the layout drawings and package lists that have accompanied this job.
- Before proceeding, confirm that backing of walls and floor is adequate to support secure mounting of the toilet compartment units.
- Establish and mark pilaster center line from back wall.
- Establish and mark panel center lines for wall brackets.
- Establish pilaster floor fastener locations from side wall according to shop drawings. (Note floor fasteners are located 1" from edge of pilaster.)
- Mark wall bracket holes using brackets as templates.

FIGURE 1

STEP 2 WALL BRACKETS AND FLOOR ANCHORS

- Drill holes for wall brackets and floor anchors of appropriate size for particular fastening devices supplied. Typically, 5/16" bit for walls, 1/4" bit for compartment thru-bolts, and 3/16" bit for floors. (Note: As site conditions and hardware combinations vary, an assortment of bit sizes are recommended.)
- Insert anchoring devices in walls and secure wall brackets.
- Attach the shoes to the concrete floor using the 1/4" concrete screws. (Note: The hole in the side of the shoe should be placed on the inside of the compartment.)
- Adjust the location of the shoes according to the door opening size and secure shoes to the floor.

FIGURE 2

STEP 3 POSITION PANEL

- Place panel on a support, 14" above the floor.
- Set it into wall brackets, but do not fasten panel at this time.

NOTE: Metal heat-sink strip will be on bottom of panel

FIGURE 3

STEP 4 **PILASTER PREPARATION**

- A. Align brackets in position on rear of pilasters. Refer to layout drawings.
- B. Fasten brackets to pilaster with sheet metal screws.
- C. Pilasters at wall will not have U-brackets, but should be prepared for wall (and floor fastening) as required by compartment layout.

FIGURE 4

STEP 5 **INSTALL PILASTERS**

- A. Insert the leveling bolt into the threaded insert at the bottom of the pilaster.
- B. Insert the pilaster into the shoe.
- C. Level the top of all pilasters by adjusting the leveling bolt to desired position.

Note: To determine how far to insert the leveling bolt, find the highest point on the floor, and fully insert the bolt on the pilaster that will be mounted in that location. Adjust all other leveling bolts accordingly.
